1. (Previously Amended) A system for presenting a status indicator within at least one electronic document to provide user status associated with one or more system users, the system comprising:

user indicator presentation means for presenting one or more user indicators as links within the at least one electronic document, each user indicator being associated with at least one system user;

status determining means for determining the status of the one or more system users, wherein the status of the one or more system users is associated with the one or more user indicators; and

status indicator presenting means for presenting at least the status indicator and the user indicators in the at least one electronic document to provide the status of selected system users.

*Sub C5*

5. (Previously Amended) The system of claim 1, wherein the status indicator presenting means indicates the status of a selected system user by altering representations of the status indicator for the selected user.

*BS*

6. (Previously Amended) A method for presenting a status indicator within at least one electronic document to provide system user status for one or more system users, the method comprising the steps of:

presenting one or more user indicators as links within the at least one electronic document;

associating each user indicator with at least one system user;

determining the status of the one or more system users associated with the one or more user indicators; and

presenting at least the status indicator and the one or more user indicators, wherein the status indicator indicates the status of selected system users.

7. (Previously Amended) The method of claim 6, wherein the step of presenting at least the status indicator and the one or more user indicators comprises presenting at least one symbol with the status indicator.

8. (Previously Amended) The method of claim 6, wherein the step of presenting at least the status indicator and the one or more user indicators comprises presenting at least one menu with the status indicator.

9. (Previously Amended) The method of claim 6, wherein the step of presenting at least the status indicator comprises color coding.

10. (Previously Amended) The method of claim 6, further comprising the step of presenting one or more communication preferences associated with the one or more system users.

*B6 Single*  
11. (Original) The method of claim 10, further comprising the step of establishing one or more communications with the one or more system users.

*Sub C7*  
12. (Previously Amended) The method of claim 6, further comprising the step of enabling at least one application to be shared among the one or more system users.

*BT*  
13. (Previously Amended) A system for presenting a status indicator within at least one electronic document to provide system user status for one or more system users, the system comprising:

a user indicator presentation module that presents one or more user indicators as links within the at least one electronic document, each user indicator being associated with at least one system user;

*B*  
a status determining module that determines a status of the one or more system users associated with the one or more user indicators; and  
a status indicator presenting module that presents at least the status indicator and the user indicators in the at least one electronic document to provide the status of selected system users.

*SS Sub C*  
14. (Original) The system of claim 13, wherein the status indicator comprises at least one symbol.

*Sub C*  
15. (Previously Amended) The system of claim 13, wherein the status indicator presenting module presents the status indicator using at least one menu.

*Sub C 10*  
16. (Original) The system of claim 13, wherein the status indicator comprises color coding.

*Sub C 11*  
17. (Previously Amended) The system of claim 13, wherein the status indicator presenting module is adapted to indicate the status of selected system users by altering representations of the status indicator for the selected system user.

*BH*  
18. (Previously Amended) A processor readable medium having processor readable code embodied therein for presenting a status indicator within at least one electronic document to provide system user status for one or more system users, the medium comprising:

~~22. (Previously Amended) The medium of claim 21, further comprising communication establishing processor readable code that causes the processor to establish at least one communication with the one or more system users.~~

~~23. (Previously Amended) The medium of claim 22, further comprising communication preference processor readable code that causes the processor to enable the one or more system users to identify a preference for receiving the at least one communication.~~

~~24. (Previously Amended) The medium of claim 18, further comprising conference communications processor readable code that causes the processor to enable the one or more system users to establish conference communications.~~

~~25. (Previously Amended) The medium of claim 24, wherein the conference communications processor readable code causes the processor to enable the one or more system users to share at least one application.~~

a status determining module associated with a first system application that determines a status of at least one system user associated with the one or more user indicators; and a status indicator presenting module associated with a second system application that presents at least the status indicator and the user indicators in the at least one electronic document to provide the status of selected system users, wherein the first system application and the second system application are different system applications.

*BKT*  
✓ 27. (Previously Added) A system for presenting a status indicator within at least one non-HTML application to provide system user status for one or more system users, the system comprising:

a user indicator presentation module that presents one or more user indicators as links within the at least one non-HTML application, each user indicator being associated with at least one system user;

a status determining module that determines a status of the at least one system user associated with the one or more user indicators; and

a status indicator presenting module that presents at least the status indicator and the user indicators in the at least one non-HTML application to provide the status of selected system users.

✓ 28. (Previously Added) A communication system comprising:

a user indicator presentation module that presents one or more user indicators as links in at least one electronic document, each user indicator being associated with at least one system

user, wherein the at least one system user comprises all system users capable of accessing the communication system;

a status determining module associated with a first system application that determines a status of the at least one system user associated with the one or more user indicators; and

a status indicator presenting module associated with a second system application that presents at least a status indicator and the user indicators in the at least one electronic document to provide the status of selected system users, wherein the first system application and the second system application are different system applications.

✓ 29. (Previously Added) A communication system comprising:

a user indicator presentation module that presents one or more user indicators appearing in at least one electronic document as links, each user indicator being associated with at least one system user, wherein the at least one system user comprises all system users capable of accessing the communication system;

a status determining module that determines a status of the at least one system user associated with the one or more user indicators; and

a status indicator presenting module that presents at least a status indicator and the user indicators in the at least one electronic document to provide the status of selected system users.
